EDUCATION

B.Tech Computer Science & Engineering2022–2026

Parul University, Vadodara

GSEB Secondary & Higher Secondary Certificate2020 & 2022

St. Mary’s School, Vapi

TECHNICAL SKILLS

Languages:	JavaScript, Python, Java, C, Shellscrip
Frontend:	React.js, Next.js, (HTML, CSS, JS), Flutter, XML
Backend:	Node.js, Express.js, Firebase, Flask
AI/ML:	TensorFlow, PyTorch, NLP, Panda, NumPy, Matplotlib
Tools:	AWS, Google Cloud, Docker, Git, Github, PowerBI, Huggingface, Vercel, Railway, Figma

PROJECTS

TransitShareProject LinkDemo2024

Flutter — Node.js — MongoDB — Socket.IO — Mapbox — GPS Tracking

- Engineered a real-time bus tracking and location sharing app enabling live GPS updates between drivers and passengers
- Implemented interactive maps with route visualization, ETA computation, and smart notifications for approaching buses
- Built secure authentication with JWT and optimized geospatial queries to support thousands of concurrent users

AI Image Recognition ChatbotProject LinkDemo2024

Python — TensorFlow — OpenCV — NLP — Flask — React

- Built a multimodal chatbot combining deep-learning image recognition (CNN/YOLO) with natural language understanding for human-like conversations
- Achieved 99.9% classification accuracy with sub-100ms response time across 1000+ object categories and multi-format image support
- Designed a scalable microservice architecture handling 10,000+ concurrent users with enterprise-grade security and end-to-end encryption

Medassist+Project LinkDemo2025

Flutter — Node js — Mongoddb — Flask — opencv — Huggingface — LLms — Html,css,js

- Developed MediAssist, an AI-powered medical emergency assistant using QR/face scan-based patient identification
- Built an online/offline medical bot for medicine explanations, symptom analysis, and disease prediction
- Implemented a secure medical data vault for storing prescriptions, reports, and health history with auto-extraction
- Created a web/mobile platform with face-scan QR scan support to instantly fetch and share medical details

FinnsathiProject LinkDemo2025

Flutter — Node js — Mongoddb — Flask — opencv — maps — LLms — Html,css,js — figma

- Built a smart AI-driven personal finance app using Flutter and Firebase, offering secure cloud sync and seamless multi-device access
- Implemented automated expense tracking with OCR + ML, extracting bill data from receipts/SMS/PDFs and mapping them to shop/merchant categories
- Designed an interactive financial dashboard showcasing real-time balance, savings, spending trends, and shop-wise analytics for data-driven decisions
- Added an AI chatbot with voice interaction to deliver budgeting tips, spending alerts, and personalized financial recommendations in a conversational manner

CERTIFICATIONS

PU Code Hackathon 2.02025

ReactJS, AI/ML, Node.js, Express.js, MongoDB

Vadodara Hackathon 5.02024

Flask, AI/ML, (HTML, CSS, JS), Bootstrap

SQL and Databases Certification2024

Infosys Springboard

Computer Networks and Internet Protocol2023-2024

NPTEL - IIT Kharagpur

Theory of computation2024

NPTEL - IIT Kharagpur

Internet of Things2025
